Product datasheet for CF810955

RNF14 Mouse Monoclonal Antibody [Clone ID: OTI3A4]

Product data:

Product Type:	Primary Antibodies	
Clone Name:	OTI3A4	
Applications:	WB	
Recommended Dilution:	WB 1:200	
Reactivity:	Human, Mouse, Rat	
Host:	Mouse	
lsotype:	lgG1	
Clonality:	Monoclonal	
Immunogen:	Human recombinant protein fragment corresponding to amino acids 1-220 of human RNF14 (NP_899647) produced in E.coli.	
Formulation:	Lyophilized powder (original buffer 1X PBS, pH 7.3, 8% trehalose)	
Reconstitution Method:	For reconstitution, we recommend adding 100uL distilled water to a final antibody concentration of about 1 mg/mL. To use this carrier-free antibody for conjugation experiment, we strongly recommend performing another round of desalting process. (OriGene recommends Zeba Spin Desalting Columns, 7KMWCO from Thermo Scientific)	
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)	
Conjugation:	Unconjugated	
Storage:	Store at -20°C as received.	
Stability:	Stable for 12 months from date of receipt.	
Predicted Protein Size:	53.7 kDa	
Gene Name:	ring finger protein 14	
Database Link:	<u>NP_899647</u> <u>Entrez Gene 56736 MouseEntrez Gene 619577 RatEntrez Gene 9604 Human</u> <u>Q9UBS8</u>

	RNF14 Mouse Monoclonal Antibody [Clone ID: OTI3A4] – CF810955	
Background:	The protein encoded by this gene contains a RING zinc finger, a motif known to be involved in protein-protein interactions. This protein interacts with androgen receptor (AR) and may function as a coactivator that induces AR target gene expression in prostate. A dominant negative mutant of this gene has been demonstrated to inhibit the AR-mediated growth of prostate cancer. This protein also interacts with class III ubiquitin-conjugating enzymes (E2s) and may act as a ubiquitin-ligase (E3) in the ubiquitination of certain nuclear proteins. Six alternatively spliced transcript variants encoding two distinct isoforms have been reported. [provided by RefSeq, Jan 2011]	
Synonyms: Protein Families	ARA54; HFB30; HRIHFB2038; TRIAD2 Druggable Genome, Transcription Factors

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY RNF14 ([RC223362], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-RNF14. Positive lysates [LY405271] (100ug) and [LC405271] (20ug) can be purchased separately from OriGene.
