| | TIM 3 (HAVCR2) Mouse Monoclonal Antibody [Clone ID: OTI7B10] – CF812575 |
|-------------------------------|--|
| Background: | The protein encoded by this gene belongs to the immunoglobulin superfamily, and TIM family of proteins. CD4-positive T helper lymphocytes can be divided into types 1 (Th1) and 2 (Th2) on the basis of their cytokine secretion patterns. Th1 cells are involved in cell-mediated immunity to intracellular pathogens and delayed-type hypersensitivity reactions, whereas, Th2 cells are involved in the control of extracellular helminthic infections and the promotion of atopic and allergic diseases. This protein is a Th1-specific cell surface protein that regulates macrophage activation, and inhibits Th1-mediated auto- and alloimmune responses, and promotes immunological tolerance. | Synonyms: Protein Families | CD366; HAVcr-2; KIM-3; SPTCL; Tim-3; TIM3; TIMD-3; TIMD3 Druggable Genome, Transmembrane |

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY HAVCR2 ([RC209440], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-HAVCR. Positive lysates [LY403200] (100ug) and [LC403200] (20ug) can be purchased separately from OriGene.

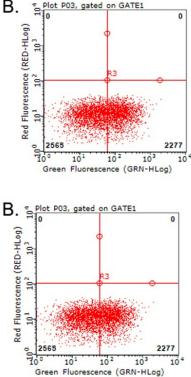

Flow cytometric analysis of living 293T cells transfected with HAVCR2 overexpression plasmid ([RC209440]), Red)/empty vector ([PS100001], Blue) using anti-HAVCR2 antibody ([TA812575]). Cells incubated with a non-specific antibody (Green) were used as isotype control (1:100).
