# Product datasheet for CF812777

## Xanthine Oxidase (XDH) Mouse Monoclonal Antibody [Clone ID: OTI1C10]

#### **Product data:**

Product Type:	Primary Antibodies	
Clone Name:	OTI1C10	
Applications:	WB	
Recommended Dilution:	WB 1:500	
Reactivity:	Human, Mouse, Rat	
Host:	Mouse	
lsotype:	lgG2b	
Clonality:	Monoclonal	
Immunogen:	Human recombinant protein fragment corresponding to amino acids 1-280 of human XDH (NP_000370) produced in E.coli.	
Formulation:	Lyophilized powder (original buffer 1X PBS, pH 7.3, 8% trehalose)	
Reconstitution Method:	For reconstitution, we recommend adding 100uL distilled water to a final antibody concentration of about 1 mg/mL. To use this carrier-free antibody for conjugation experiment, we strongly recommend performing another round of desalting process. (OriGene recommends Zeba Spin Desalting Columns, 7KMWCO from Thermo Scientific)	
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)	
Conjugation:	Unconjugated	
Storage:	Store at -20°C as received.	
Stability:	Stable for 12 months from date of receipt.	
Predicted Protein Size:	146.2 kDa	
Gene Name:	xanthine dehydrogenase	
Database Link:	<u>NP_000370</u> <u>Entrez Gene 22436 MouseEntrez Gene 497811 RatEntrez Gene 7498 Human</u> <u>P47989</u>	

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2024 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

	Xanthine Oxidase (XDH) Mouse Monoclonal Antibody [Clone ID: OTI1C10] – CF812777	
Background:Xanthine dehydrogenase belongs to the group of molybdenum-containing hydroxinvolved in the oxidative metabolism of purines. The encoded protein has bee a moonlighting protein based on its ability to perform mechanistically distinct Xanthine dehydrogenase can be converted to xanthine oxidase by reversible so oxidation or by irreversible proteolytic modification. Defects in xanthine dehydrogenase can be contribute to adult respiratory stress syndrome, and n influenza infection through an oxygen metabolite-dependent mechanism. [protects of the context		
Synonyms:	XAN1; XO; XOR	
Protein Families:	Druggable Genome	
Protein Pathway	<b>s:</b> Caffeine metabolism, Drug metabolism - other enzymes, Metabolic pathways, Purine metabolism

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY XDH (Cat# [RC219402], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-XDH (Cat# [TA812777])(1:500). Positive lysates [LY400135] (100ug) and [LC400135] (20ug) can be purchased separately from OriGene.
