	IL17E (IL25) Mouse Monoclonal Antibody [Clone ID: OTI12G2] – CF815233
Background:	The protein encoded by this gene is a cytokine that shares sequence similarity with interleukin 17. This cytokine can induce NF-kappaB activation, and stimulate the production of interleukin 8. Both this cytokine and interleukin 17B are ligands for the cytokine receptor IL17BR. Studies of a similar gene in mice suggest that this cytokine may be a pro- inflammatory cytokine favoring the Th2-type immune response. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Mar 2010]
Synonyms:	IL17E
Protein Families:	Druggable Genome, Secreted Protein, Transmembrane
Protein Pathway	s: Cytokine-cytokine receptor interaction
