Product images:

Rat mixed neuron/glia cultures stained with Peripherin (green channel) and Neurofilament alpha-interneixin/NF66 (red channel). These cultures contain mostly neurons which are rich in alpha-interneixin, and a subgroup which have a large amount of peripherin also, such as the prominent cell in the middle of the micrograph. Since this cell expresses large amounts of peripherin and alpha-interneixin, the green and red signals superimpose to produce a golden cell. Blue is a DNA stain. Protocol on data-sheet.
