

## **Product datasheet for DA3501**

## **Angiopoietin-2 Human Protein**

**Product data:** 

**Product Type:** Recombinant Proteins

**Description:** Angiopoietin-2 human recombinant protein, 5 μg

Species: Human Expression Host: CHO

**Predicted MW:** 60-70 kDa

**Purity:** >95% pure by SDS-PAGE and visualised by silver stain

**Buffer:** Presentation State: Purified

State: Lyophilized protein

Buffer System: 10 mM Sodium Phosphate, pH 8.0

Stabilizer: None

**Biological**: Determined by its ability to stimulate tubulogenesis in HUVEC cells using a

concentration of 0.2µg/ml.

**Endotoxin:** < 0.1 ng per µg of Ang-2

**Reconstitution Method:** Restore in water to a concentration of 0.1-1.0 mg/ml.

Do not vortex. For extended storage, it is recommended to further dilute in a buffer containing a carrier protein (example 0.1% BSA) and store in working aliquots at -20°C to -

80°C.

**Preparation:** Lyophilized protein

**Protein Description:** Recombinant Human ANG-2 is a C-terminal Histidine tagged glycoprotein which migrates with

an apparent molecular mass of 60 – 70 kDa by SDS-PAGE under reducing conditions.

Sequencing analysis shows an N-terminal sequence starting with residue 68 (D) of the ANG-2

precursor protein.

Storage: Store lyophilized at 2-8°C for 6 months or at -20°C long term.

After reconstitution store the antibody undiluted at 2-8°C for one month

or (in aliquots) at -20°C long term. Avoid repeated freezing and thawing.

**Stability:** Shelf life: one year from despatch.

**RefSeq:** NP 001112359

Locus ID: 285

## SORIGENE Angiopoietin-2 Human Protein – DA3501

UniProt ID: <u>015123</u>

Cytogenetics: 8p23.1

**Synonyms:** ANG-2, ANG2, ANGPT2

**Summary:** This gene belongs to the angiopoietin family of growth factors. The protein encoded by this

gene is an antagonist of angiopoietin 1, and both angiopoietin 1 and angiopoietin 2 are ligands for the endothelial TEK receptor tyrosine kinase. Angiopoietin 2 is upregulated in multiple inflammatory diseases and is implicated in the direct control of inflammation-related signaling pathways. The encoded protein affects angiogenesis during embryogenesis and tumorigenesis, disrupts the vascular remodeling ability of angiopoietin 1, and may induce endothelial cell apoptosis. This gene serves a prognostic biomarker for acute respiratory

distress syndrome. [provided by RefSeq, Aug 2020]

**Protein Families:** Druggable Genome, Secreted Protein
