Interleukin-4 / IL4 Human Protein

Product data:

Product Type: Recombinant Proteins

Description: Interleukin-4 / IL4 human recombinant protein, 10 µg

Species: Human E. coli **Expression Host: Predicted MW:** 15 kDa

Purity: >98% pure by SDS-PAGE and HPLC analyses.

Buffer: Presentation State: Purified

> State: Lyophilized purified protein. Buffer System: PBS without stabilizer.

Bioactivity: Biological: Recombinant Human IL-4 is fully biologically active when compared to standards.

The ED50 as determined by the dose-dependent stimulation of Human TF-1 cells is 0.1-0.3

For most in vitro applications, IL-4 exerts its biological activity in the concentration range of

0.1 to 10.0 ng/ml.

Specific: 5 x 106 units/mg

Endotoxin: < 0.1 ng per μ g (IEU/ μ g) of IL-4

Reconstitution Method: The lyophilized IL-4 is soluble in water and most aqueous buffers.

Restore in water to a concentration of 100 ng/ml.

This solution can be diluted into water or other buffered solutions or stored at -20°C for

future use.

Preparation: Lyophilized purified protein.

Protein Description: Recombinant Human IL-4 produced in E. coli is a single, non-glycosylated polypeptide chain

having a molecular mass of 14.9 kDa and containing 129 amino acid residues.

Note: Centrifuge vial before opening!

Storage: Store lyophilized at 2-8°C for 6 months or at -20°C long term.

After reconstitution store the antibody undiluted at 2-8°C for one month

or (in aliquots) at -20°C long term. Avoid repeated freezing and thawing.

Stability: Shelf life: one year from despatch.

RefSeq: NP 000580

Locus ID: 3565

UniProt ID: P05112, D4HNR6

Cytogenetics: 5q31.1

Synonyms: BCGF-1; BCGF1; BSF-1; BSF1; IL-4

Summary: The protein encoded by this gene is a pleiotropic cytokine produced by activated T cells. This

cytokine is a ligand for interleukin 4 receptor. The interleukin 4 receptor also binds to IL13, which may contribute to many overlapping functions of this cytokine and IL13. STAT6, a signal transducer and activator of transcription, has been shown to play a central role in mediating the immune regulatory signal of this cytokine. This gene, IL3, IL5, IL13, and CSF2 form a cytokine gene cluster on chromosome 5q, with this gene particularly close to IL13. This gene,

IL13 and IL5 are found to be regulated coordinately by several long-range regulatory elements in an over 120 kilobase range on the chromosome. IL4 is considered an important cytokine for tissue repair, counterbalancing the effects of proinflammatory type 1 cytokines, however, it also promotes allergic airway inflammation. Moreover, IL-4, a type 2 cytokine, mediates and regulates a variety of human host responses such as allergic, anti-parasitic, wound healing, and acute inflammation. This cytokine has been reported to promote resolution of neutrophil-mediated acute lung injury. In an allergic response, IL-4 has an essential role in the production of allergen-specific immunoglobin (Ig) E. This pro-

inflammatory cytokine has been observed to be increased in COVID-19 (Coronavirus disease 2019) patients, but is not necessarily associated with severe COVID-19 pathology. Two alternatively spliced transcript variants of this gene encoding distinct isoforms have been

reported. [provided by RefSeq, Aug 2020]

Protein Families: Druggable Genome, Secreted Protein

Protein Pathways: Allograft rejection, Asthma, Autoimmune thyroid disease, Cytokine-cytokine receptor

interaction, Fc epsilon RI signaling pathway, Hematopoietic cell lineage, Jak-STAT signaling

pathway, T cell receptor signaling pathway
