#### Interleukin-1 beta / IL-1B Human Protein

### **Product data:**

**Product Type:** Recombinant Proteins

**Description:** Interleukin-1 beta / IL-1B human recombinant protein, 50 μg

Species: Human
Expression Host: E. coli

**Expression cDNA Clone** 

or AA Sequence:

APVRSLNCTL RDSQQKSLVM SGPYELKALH LQGQDMEQQV VFSMSFVQGE ESNDKIPVAL GLKEKNLYLS CVLKDDKPTL QLESVDPKNY PKKKMEKRFV FNKIEINNKL EFESAOFPNW

YISTSQANMP VFLGGTKGGQ DITDFTMQFV SS

**Predicted MW:** 17 kDa

**Purity:** >98% pure by SDS-PAGE and Silver stain

**Buffer:** Presentation State: Purified

State: Lyophilized purified protein

Buffer System: PBS Stabilizer: None

**Bioactivity:** Biological: Measured in a cell proliferation assay using murine D10G4.1 cells. The ED50 for

this effect is typically 2-10 pg/ml.

**Endotoxin:** < 0.1 ng per μg (IEU/μg) of rh IL-1beta

**Reconstitution Method:** The lyophilized rh IL-1 beta is soluble in water and most agueous buffers.

The lyophilized powder can be restored in water to a concentration of 0.1 mg/ml. This solution can be diluted into other buffered solutions or stored at -20°C for future use.

**Preparation:** Lyophilized purified protein

**Protein Description:** Recombinant Human Interleukin-1 beta produced in E.Coli is a non-glycosylated, Interleukin-1

beta Polypeptide chain containing 153 amino acids and having a molecular mass of 17.0 kDa.

Result by N-terminal sequencing: APVRSL and MAPVRS

Note: Range: 0.1-10.0 ng/ml

**Storage:** Store lyophilized at RT for 3 weeks or (preferably in a desiccator) at -20°C for longer.

Following reconstitution store the antibody undiluted at 2-8°C for one week

or (in aliquots) at -20°C for longer.

For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA)

Avoid repeated freezing and thawing.

**Stability:** Shelf life: one year from despatch.

RefSeq: NP 000567

 Locus ID:
 3553

 UniProt ID:
 P01584

 Cytogenetics:
 2q14.1

Synonyms: IL-1; IL1-BETA; IL1beta; IL1F2

**Summary:** The protein encoded by this gene is a member of the interleukin 1 cytokine family. This

cytokine is produced by activated macrophages as a proprotein, which is proteolytically processed to its active form by caspase 1 (CASP1/ICE). This cytokine is an important mediator of the inflammatory response, and is involved in a variety of cellular activities, including cell proliferation, differentiation, and apoptosis. The induction of cyclooxygenase-2 (PTGS2/COX2) by this cytokine in the central nervous system (CNS) is found to contribute to inflammatory

pain hypersensitivity. Similarly, IL-1B has been implicated in human osteoarthritis pathogenesis. Patients with severe Coronavirus Disease 2019 (COVID-19) present elevated levels of pro-inflammatory cytokines such as IL-1B in bronchial alveolar lavage fluid samples.

The lung damage induced by the Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) is to a large extent, a result of the inflammatory response promoted by cytokines such as IL-1B. This gene and eight other interleukin 1 family genes form a cytokine gene cluster on

chromosome 2. [provided by RefSeq, Jul 2020]

**Protein Families:** Druggable Genome, Secreted Protein

Protein Pathways: Alzheimer's disease, Apoptosis, Cytokine-cytokine receptor interaction, Cytosolic DNA-sensing

pathway, Graft-versus-host disease, Hematopoietic cell lineage, MAPK signaling pathway, NOD-like receptor signaling pathway, Prion diseases, Toll-like receptor signaling pathway,

Type I diabetes mellitus
