Background:	CD1 family molecules have structural homologies with MHC class I molecules. They are monomeric proteins of 50 kDa, non-covalently associated with Beta-2-microglobulin. Human CD1a molecules are divided in 2 groups. Group 1 includes CD1a, CD1b, and CD1c, while group 2 consists of the CD1d molecule. CD1a is mainly expressed at the cell-surface and in recycling vesicles. CD1a occurs in Birbeck granules of Langerhans cells and plays a role in presentation of non-peptide antigens. CD1a is expressed in vitro on CD34 <sup>+</sup> -generated DCs and on monocyte-derived DCs. ( <i>Burdin N. et al., 1999, Curr Opin Immunol, 11:326-31</i> ).
