Background:	Langerin/CD207 is a transmembrane C-type lectin receptor (CLR) of epidermal and mucosal Langerhans cells (LCs) that induces Birbeck granule formation. Langerin features a single carbohydrate recognition domain (CRD) with mannose-type specificity in its extracellular portion. Langerin is unique among the CLRs in that it contains an intracellular domain with a proline-rich motif. Langerin expression has not been reported outside the DC system. Note:

Protocol: Langerin-gp120 blocking protocol:

Mock- and Langerin-transfected CHO cells are incubated with biotin-labelled gp160 (5µg/ml) and clone 808E10.01 at (1 to 10µg/ml) in PBS 45 min. at RT. Cells were washed in PBS 5min at 1600rpm, and stained with Streptavidin-PE 30 min at 4°C (DAKO). A last PBS wash is performed before Flow cytometry analysis.
