# Product datasheet for DDX0480A546-100

### TLR8 Mouse Monoclonal Antibody [Clone ID: 303F1.14]

## Product data:

Product Type:	Primary Antibodies
Clone Name:	303F1.14
Applications:	IF
Recommend Dilution:	DDX0480P-50 / DDX0480P-100 Purified: WB, IHC frozen section, intra FC DDX0480A488-50 / DDX0480A488-100 Alexa-fluor®488: IF, intra Flow Cytometry DDX0480A546-50 / DDX0480A546-100 Alexa-fluor®546: IF DDX0480A647-50 / DDX0480A647-100 Alexa-fluor®647: intra Flow Cytometry DDX0480B-50 / DDX0480B-100 Biotin: WB.
	<b>Usage recommendation:</b> *This monoclonal antibody may be used between 1-10 μg/ml. *Optimal dilution should be determined by each laboratory for each application. *Coupled antibody: to maintain RT before using.
Reactivity:	Human
Host:	Mouse
lsotype:	lgG2a
Clonality:	Monoclonal
Immunogen:	Human recombinant TLR8.
Specificity:	Human TLR8. <b>Negative</b> on Mouse, Rat.
Formulation:	<u>Purified:</u> 100 μg in 200μl / 50 μg in 100 μl Tris-NaCl pH 8. <u>Coupled:</u> 100 μg in 200μl / 50 μg in 100 μl Tris PBS 50% glycerol. Label: Alexa Fluor 546
Concentration:	0.5 mg/ml
Purification:	QMA Hyper D ion exchange chromatography
Conjugation:	Alexa Fluor 546
Gene Name:	toll like receptor 8
Database Link:	Entrez Gene 51311 Human

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2020 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

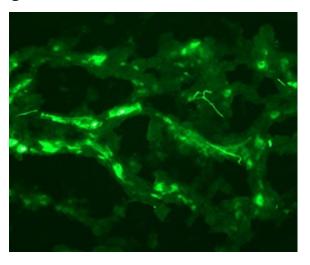

#### **CRIGENE** TLR8 Mouse Monoclonal Antibody [Clone ID: 303F1.14] – DDX0480A546-100

Background:The Toll-Like Receptors (TLRs) represent a family of germline-encoded proteins, composed of<br/>C-terminal leucine-rich repeats (LRRs), and an N-terminal Toll/Interleukin-1 Receptor (TIR)<br/>domain. In humans, 10 TLRs, sharing high sequence homology, have been identified. TLRs are<br/>critical for the detection of pathogen-associated molecular patterns (PAMPs) by the innate<br/>immune system. LRRs recognize PAMPs, and signal transduction events, initiated by the TIR<br/>domain, lead to activation of transcription factors such as AP-1, IRFs and NFkB, and therefore<br/>expression of proinflammatory cytokines and costimulatory molecules. TLR7, TLR8 and TLR9<br/>form a subgroup in the TLR family, because of a strong sequence homology and the nature of<br/>their ligands, which are nucleic acids or related molecules. TLR7 and TLR8 are triggered by<br/>GU-rich, single-stranded RNA (ssRNA) derived from viruses, or by synthetic small molecules<br/>mimicking ssRNA, such as imidazoquinolines. While TLR7 is expressed in lung, placenta and<br/>spleen, TLR8 expression is restricted to lung and peripheral blood leukocytes (PBLs). Heil F. et<br/>al,2003 ,Eur.J.Immunol, 33, 2987)

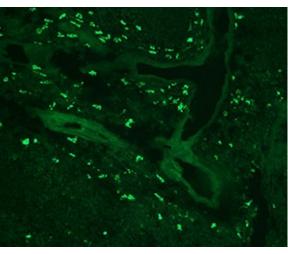

Synonyms:

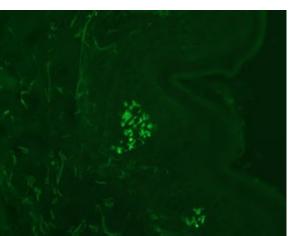

Toll-like receptor 8, UNQ249/PRO286
