## IL8 (CXCL8) Mouse Monoclonal Antibody [Clone ID: 18-60]

#### **Product data:**

**Product Type:** Primary Antibodies

Clone Name: 18-60
Applications: ELISA

Recommended Dilution: ELISA: This HRP conjugated antibody can be used as a tracer antibody in sandwich ELISA

applications for human IL-8 detection in combination with a monoclonal capture antibody

(Cat.-No DM1022).

Reactivity: Human
Host: Mouse
Isotype: IgG1

Clonality: Monoclonal

Immunogen: Purified recombinant human IL-8 (monocyte-derive, 72-amino acid form)

**Specificity:** This antibody recognizes both, natural and recombinant IL-8.

No cross-reactivity with human monocyte chemotactic activating factor (MCP-1) or RANTES

(Regulated on Activation, Normal T-cell Expressed, and Secreted)

**Formulation:** 0.01M PBS, pH  $7.0 \pm 0.1$  in 50% Glycerol and 0.01% thimerosal as a bacteriostat

Label: HRP

State: Liquid purified IgG fraction Label: Horseradish Peroxidase

**Purification:** Affinity Chromatography on Protein G

Conjugation: HRP

**Storage:** Upon receipt, store (in aliquots) at -20°C.

Avoid repeated freezing and thawing.

Stability: Shelf life: one year from despatch.

**Gene Name:** C-X-C motif chemokine ligand 8

**Database Link:** Entrez Gene 3576 Human

P10145

#### IL8 (CXCL8) Mouse Monoclonal Antibody [Clone ID: I8-60] - DM1023HRP

Background: IL8 is a member of the CXC chemokine family. This family of small basic heparan-binding

proteins are proinflammatory and primarily mediate the activation and migration of

neutrophils into tissue from peripheral blood.

This chemokine is one of the major mediators of the inflammatory response and is secreted

by several cell types in response to an inflammatory stimulus. It functions as a

chemoattractant, and is also a potent angiogenic factor. IL8 attracts neutrophils, basophils,

and T-cells, but not monocytes.

Cystic fibrosis (CF) is characterized by severe lung inflammation. The inflammatory process is believed to be caused by massive overproduction of the proinflammatory protein IL8, and the high levels of IL8 in the CF lung are therefore believed to be the central mechanism behind CF

lung pathophysiology.

Synonyms: CXCL8, Protein 3-10C, Emoctakin, GCP1, MDNCF, MONAP, NAP1

**Protein Families:** Druggable Genome, Secreted Protein, Transmembrane

**Protein Pathways:** Bladder cancer, Chemokine signaling pathway, Cytokine-cytokine receptor interaction,

Epithelial cell signaling in Helicobacter pylori infection, NOD-like receptor signaling pathway, Pathways in cancer, RIG-I-like receptor signaling pathway
