Product Type:	Knockout Kits (CRISPR)
Format:	2 gRNA vectors, 1 Luciferase-Puro donor, 1 scramble control
Donor DNA:	Luciferase-Puro
Symbol:	CDK5
Locus ID:	1020
Components:	<b>KN200342G1</b> , CDK5 gRNA vector 1 in pCas-Guide CRISPR vector (GE100002) <b>KN200342G2</b> , CDK5 gRNA vector 2 in pCas-Guide CRISPR vector (GE100002) <b>KN200342LPD</b> , donor DNA containing left and right homologous arms and Luciferase-Puro functional cassette. <b>GE100003</b> , scramble sequence in pCas-Guide vector
Disclaimer:	These products are manufactured and supplied by OriGene under license from ERS. The kit is designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the experimental process.
RefSeq:	<u>NM 001164410, NM 004935</u>
UniProt ID:	<u>Q00535</u>
Synonyms:	PSSALRE
Summary:	This gene encodes a proline-directed serine/threonine kinase that is a member of the cyclin- dependent kinase family of proteins. Unlike other members of the family, the protein encoded by this gene does not directly control cell cycle regulation. Instead the protein, which is predominantly expressed at high levels in mammalian postmitotic central nervous system neurons, functions in diverse processes such as synaptic plasticity and neuronal migration through phosphorylation of proteins required for cytoskeletal organization, endocytosis and exocytosis, and apoptosis. In humans, an allelic variant of the gene that results in undetectable levels of the protein has been associated with lethal autosomal recessive lissencephaly-7. Alternative splicing results in multiple transcript variants. [provided by

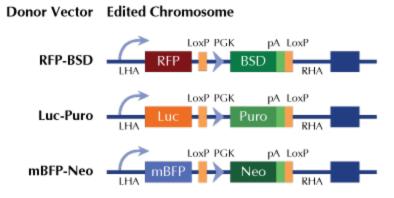

RefSeq, May 2015]
