

Product datasheet for KN200466RB

HADHA Human Gene Knockout Kit (CRISPR)

Product data:

Product Type: Knockout Kits (CRISPR)

Format: 2 gRNA vectors, 1 RFP-BSD donor, 1 scramble control

Donor DNA: Symbol: **HADHA** 3030 Locus ID:

KN200466G1, HADHA gRNA vector 1 in pCas-Guide CRISPR vector (GE100002) Components:

KN200466G2, HADHA gRNA vector 2 in pCas-Guide CRISPR vector (GE100002)

KN200466RBD, donor DNA containing left and right homologous arms and RFP-BSD

functional cassette.

GE100003, scramble sequence in pCas-Guide vector

Disclaimer: These products are manufactured and supplied by OriGene under license from ERS. The kit is

> designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the

experimental process.

RefSeq: NM 000182 UniProt ID: P40939

Synonyms: ECHA; GBP; HADH; LCEH; LCHAD; MTPA; TP-ALPHA

Summary: This gene encodes the alpha subunit of the mitochondrial trifunctional protein, which

> catalyzes the last three steps of mitochondrial beta-oxidation of long chain fatty acids. The mitochondrial membrane-bound heterocomplex is composed of four alpha and four beta subunits, with the alpha subunit catalyzing the 3-hydroxyacyl-CoA dehydrogenase and enoyl-CoA hydratase activities. Mutations in this gene result in trifunctional protein deficiency or LCHAD deficiency. The genes of the alpha and beta subunits of the mitochondrial trifunctional

protein are located adjacent to each other in the human genome in a head-to-head

orientation. [provided by RefSeq, Jul 2008]
