Disclaimer: These products are manufactured and supplied by OriGene under license from ERS. The kit is

> designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the

experimental process.

**Summary:** Nucleoside diphosphate (NDP) kinases (EC 2.7.4.6), such as NME6, are ubiquitous enzymes

that catalyze transfer of gamma-phosphates, via a phosphohistidine intermediate, between

nucleoside and dioxynucleoside tri- and diphosphates (Mehus et al., 1999 [PubMed

10453732]).[supplied by OMIM, Jul 2010]
