

Product datasheet for **KN200655**

ERK5 (MAPK7) Human Gene Knockout Kit (CRISPR)

Product data:

Product Type:	Knockout Kits (CRISPR)
Format:	2 gRNA vectors, 1 GFP-puro donor, 1 scramble control
Donor DNA:	GFP-puro
Symbol:	ERK5
Locus ID:	5598
Components:	<p>KN200655G1, ERK5 gRNA vector 1 in pCas-Guide CRISPR vector (GE100002), Target Sequence: TGGGCGGGTTCGGCCTTCAC</p> <p>KN200655G2, ERK5 gRNA vector 2 in pCas-Guide CRISPR vector (GE100002), Target Sequence: AGACGCGCAGGACGGCTCTG</p> <p>KN200655D, donor DNA containing left and right homologous arms and GFP-puro functional cassette.</p>

Homologous arm and GFP-puro sequences:

pUC vector backbone in gray; **Left arm sequence in blue**; **GFP-puro in green**; **Right arm in violet**

GE100003, scramble sequence in pCas-Guide vector

Disclaimer:

These products are manufactured and supplied by OriGene under license from ERS. The kit is designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the experimental process.

RefSeq:

[NM_002749](#), [NM_139032](#), [NM_139033](#), [NM_139034](#)

UniProt ID:

[Q13164](#)

Synonyms:

BMK1; ERK4; ERK5; PRKM7

Summary:

The protein encoded by this gene is a member of the MAP kinase family. MAP kinases act as an integration point for multiple biochemical signals, and are involved in a wide variety of cellular processes such as proliferation, differentiation, transcription regulation and development. This kinase is specifically activated by mitogen-activated protein kinase kinase 5 (MAP2K5/MEK5). It is involved in the downstream signaling processes of various receptor molecules including receptor type kinases, and G protein-coupled receptors. In response to extracellular signals, this kinase translocates to cell nucleus, where it regulates gene expression by phosphorylating, and activating different transcription factors. Four alternatively spliced transcript variants of this gene encoding two distinct isoforms have been reported. [provided by RefSeq, Jul 2008]
