

Product datasheet for KN201645BN

Troduct datasirect for Kitzoronsbi

PARK7 Human Gene Knockout Kit (CRISPR)

Product data:

Product Type: Knockout Kits (CRISPR)

Format: 2 gRNA vectors, 1 mBFP-Neo donor, 1 scramble control

Donor DNA: mBFP-Neo

Symbol: PARK7

Locus ID: 11315

Components: KN201645G1, PARK7 gRNA vector 1 in pCas-Guide CRISPR vector (GE100002)

KN201645G2, PARK7 gRNA vector 2 in pCas-Guide CRISPR vector (GE100002)

KN201645BND, donor DNA containing left and right homologous arms and mBFP-Neo

functional cassette.

GE100003, scramble sequence in pCas-Guide vector

Disclaimer: These products are manufactured and supplied by OriGene under license from ERS. The kit is

designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the

experimental process.

RefSeq: <u>NM 001123377</u>, <u>NM 007262</u>

UniProt ID: Q99497

Synonyms: DJ-1; DJ1; HEL-S-67p

Summary: The product of this gene belongs to the peptidase C56 family of proteins. It acts as a positive

regulator of androgen receptor-dependent transcription. It may also function as a redoxsensitive chaperone, as a sensor for oxidative stress, and it apparently protects neurons against oxidative stress and cell death. Defects in this gene are the cause of autosomal

recessive early-onset Parkinson disease 7. Two transcript variants encoding the same protein

have been identified for this gene. [provided by RefSeq, Jul 2008]
