

Product datasheet for KN202896LP

Cystatin SN (CST1) Human Gene Knockout Kit (CRISPR)

Product data:

Product Type:	Knockout Kits (CRISPR)
Format:	2 gRNA vectors, 1 Luciferase-Puro donor, 1 scramble control
Donor DNA:	Luciferase-Puro
Symbol:	Cystatin SN
Locus ID:	1469
Components:	 KN202896G1, Cystatin SN gRNA vector 1 in pCas-Guide CRISPR vector (GE100002) KN202896G2, Cystatin SN gRNA vector 2 in pCas-Guide CRISPR vector (GE100002) KN202896LPD, donor DNA containing left and right homologous arms and Luciferase-Puro functional cassette. GE100003, scramble sequence in pCas-Guide vector
RefSeq:	<u>NM 001898</u>
UniProt ID:	<u>P01037</u>
Synonyms:	cystatin 1; cystatin SA-l; cystatin SN; cysteine proteinase inhibitor, type 2 family; OTTHUMP00000030444; OTTHUMP00000164184
Summary:	The cystatin superfamily encompasses proteins that contain multiple cystatin-like sequences. Some of the members are active cysteine protease inhibitors, while others have lost or perhaps never acquired this inhibitory activity. There are three inhibitory families in the superfamily, including the type 1 cystatins (stefins), type 2 cystatins and the kininogens. The type 2 cystatin proteins are a class of cysteine proteinase inhibitors found in a variety of human fluids and secretions, where they appear to provide protective functions. The cystatin locus on chromosome 20 contains the majority of the type 2 cystatin genes and pseudogenes. This gene is located in the cystatin locus and encodes a cysteine proteinase inhibitor found in saliva, tears, urine, and seminal fluid. [provided by RefSeq, Jul 2008]
