### **NUF2 Human Gene Knockout Kit (CRISPR)**

#### **Product data:**

**Product Type:** Knockout Kits (CRISPR)

**Format:** 2 gRNA vectors, 1 Luciferase-Puro donor, 1 scramble control

**Donor DNA:** Luciferase-Puro

Symbol: NUF2 Locus ID: 83540

**Components:** KN203340G1, NUF2 gRNA vector 1 in pCas-Guide CRISPR vector (GE100002)

KN203340G2, NUF2 gRNA vector 2 in pCas-Guide CRISPR vector (GE100002)

KN203340LPD, donor DNA containing left and right homologous arms and Luciferase-Puro

functional cassette.

**GE100003**, scramble sequence in pCas-Guide vector

**Disclaimer:** These products are manufactured and supplied by OriGene under license from ERS. The kit is

designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the

experimental process.

**RefSeg:** NM 031423, NM 145697

UniProt ID: Q9BZD4

Synonyms: CDCA1; CT106; NUF2R

**Summary:** This gene encodes a protein that is highly similar to yeast Nuf2, a component of a conserved

protein complex associated with the centromere. Yeast Nuf2 disappears from the centromere during meiotic prophase when centromeres lose their connection to the spindle pole body, and plays a regulatory role in chromosome segregation. The encoded protein is found to be associated with centromeres of mitotic HeLa cells, which suggests that this protein is a functional homolog of yeast Nuf2. Alternatively spliced transcript variants that encode the

same protein have been described. [provided by RefSeq, Jul 2008]
