Disclaimer: These products are manufactured and supplied by OriGene under license from ERS. The kit is

designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the

experimental process.

UniProt ID: Q8NBZ7

Synonyms: SDR6E1; UGD

Summary: This gene encodes an enzyme found in the perinuclear Golgi which catalyzes the synthesis of

UDP-xylose used in glycosaminoglycan (GAG) synthesis on proteoglycans. The GAG chains are

covalently attached to proteoglycans which participate in signaling pathways during

development. Multiple transcript variants encoding different isoforms have been found for

this gene. [provided by RefSeq, Dec 2014]
