

Product datasheet for **KN203488**

RGS10 Human Gene Knockout Kit (CRISPR)

Product data:

Product Type:	Knockout Kits (CRISPR)
Format:	2 gRNA vectors, 1 GFP-puro donor, 1 scramble control
Donor DNA:	GFP-puro
Symbol:	RGS10
Locus ID:	6001
Components:	<p>KN203488G1, RGS10 gRNA vector 1 in pCas-Guide CRISPR vector (GE100002), Target Sequence: CGCCGTCAGGTAAGCGGCTT</p> <p>KN203488G2, RGS10 gRNA vector 2 in pCas-Guide CRISPR vector (GE100002), Target Sequence: TGCTCAGCCGGCTCACGGCG</p> <p>KN203488D, donor DNA containing left and right homologous arms and GFP-puro functional cassette.</p>

Homologous arm and GFP-puro sequences:

pUC vector backbone in gray; Left arm sequence in blue; GFP-puro in green; Right arm in violet

Disclaimer: These products are manufactured and supplied by OriGene under license from ERS. The kit is designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the experimental process.

RefSeq: [NM_001005339](#), [NM_002925](#)

UniProt ID: [O43665](#)

Synonyms: OTTHUMP00000020597; OTTHUMP00000069158; regulator of G-protein signaling 10; regulator of G-protein signalling 10

Summary: Regulator of G protein signaling (RGS) family members are regulatory molecules that act as GTPase activating proteins (GAPs) for G alpha subunits of heterotrimeric G proteins. RGS proteins are able to deactivate G protein subunits of the Gi alpha, Go alpha and Gq alpha subtypes. They drive G proteins into their inactive GDP-bound forms. Regulator of G protein signaling 10 belongs to this family. All RGS proteins share a conserved 120-amino acid sequence termed the RGS domain. This protein associates specifically with the activated forms of the two related G-protein subunits, G-alpha_{i3} and G-alpha_z but fails to interact with the structurally and functionally distinct G-alpha subunits. Regulator of G protein signaling 10 protein is localized in the nucleus. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2008]
