

## Product datasheet for **KN203500BN**

### IRF1 Human Gene Knockout Kit (CRISPR)

#### Product data:

Product Type:	Knockout Kits (CRISPR)
Format:	2 gRNA vectors, 1 mBFP-Neo donor, 1 scramble control
Donor DNA:	mBFP-Neo
Symbol:	IRF1
Locus ID:	3659
Components:	<b>KN203500G1</b> , IRF1 gRNA vector 1 in pCas-Guide CRISPR vector (GE100002) <b>KN203500G2</b> , IRF1 gRNA vector 2 in pCas-Guide CRISPR vector (GE100002) <b>KN203500BND</b> , donor DNA containing left and right homologous arms and mBFP-Neo functional cassette. <b>GE100003</b> , scramble sequence in pCas-Guide vector

**Disclaimer:** These products are manufactured and supplied by OriGene under license from ERS. The kit is designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the experimental process.

**RefSeq:** [NM\\_002198](#), [NM\\_001354924](#), [NM\\_001354925](#), [NR\\_149068](#), [NR\\_149069](#)

**UniProt ID:** [P10914](#)

**Synonyms:** IRF-1; MAR

**Summary:** The protein encoded by this gene is a transcriptional regulator and tumor suppressor, serving as an activator of genes involved in both innate and acquired immune responses. The encoded protein activates the transcription of genes involved in the body's response to viruses and bacteria, playing a role in cell proliferation, apoptosis, the immune response, and DNA damage response. This protein represses the transcription of several other genes. As a tumor suppressor, it both suppresses tumor cell growth and stimulates an immune response against tumor cells. Defects in this gene have been associated with gastric cancer, myelogenous leukemia, and lung cancer. [provided by RefSeq, Aug 2017]
