

## Product datasheet for KN208513BN

## FAM20B Human Gene Knockout Kit (CRISPR)

**Product data:** 

**Product Type: Knockout Kits (CRISPR)** 

Format: 2 gRNA vectors, 1 mBFP-Neo donor, 1 scramble control

**Donor DNA:** mBFP-Neo Symbol: FAM20B Locus ID: 9917

**KN208513G1**, FAM20B gRNA vector 1 in pCas-Guide CRISPR vector (GE100002) Components:

KN208513G2, FAM20B gRNA vector 2 in pCas-Guide CRISPR vector (GE100002)

KN208513BND, donor DNA containing left and right homologous arms and mBFP-Neo

functional cassette.

GE100003, scramble sequence in pCas-Guide vector

NM 014864, NM 001324310, NM 001324311 RefSeq:

**UniProt ID:** 075063 Synonyms: gxk1

**Summary:** Responsible for the 2-O-phosphorylation of xylose in the glycosaminoglycan-protein linkage

> region of proteoglycans thereby regulating the amount of mature GAG chains. Sulfated glycosaminoglycans (GAGs), including heparan sulfate and chondroitin sulfate, are synthesized on the so-called common GAG-protein linkage region (GlcUAbeta1-3Galbeta1-3Galbeta1-4Xylbeta1-O-Ser) of core proteins, which is formed by the stepwise addition of monosaccharide residues by the respective specific glycosyltransferases. Xylose 2-O-

phosphorylation may influence the catalytic activity of B3GAT3 (GlcAT-I) which completes the precursor tetrasaccharide of GAG-protein linkage regions on which the repeating disaccharide

region is synthesized.[UniProtKB/Swiss-Prot Function]
