

## Product datasheet for **KN208947BN**

### beta Catenin (CTNNB1) Human Gene Knockout Kit (CRISPR)

#### Product data:

Product Type:	Knockout Kits (CRISPR)
Format:	2 gRNA vectors, 1 mBFP-Neo donor, 1 scramble control
Donor DNA:	mBFP-Neo
Symbol:	beta Catenin
Locus ID:	1499
Components:	<b>KN208947G1</b> , beta Catenin gRNA vector 1 in pCas-Guide CRISPR vector (GE100002) <b>KN208947G2</b> , beta Catenin gRNA vector 2 in pCas-Guide CRISPR vector (GE100002) <b>KN208947BND</b> , donor DNA containing left and right homologous arms and mBFP-Neo functional cassette. <b>GE100003</b> , scramble sequence in pCas-Guide vector
Disclaimer:	These products are manufactured and supplied by OriGene under license from ERS. The kit is designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the experimental process.
RefSeq:	<a href="#">NM_001098209</a> , <a href="#">NM_001098210</a> , <a href="#">NM_001904</a> , <a href="#">NM_001330729</a>
UniProt ID:	<a href="#">P35222</a>
Synonyms:	armadillo; CTNNB; MRD19
Summary:	The protein encoded by this gene is part of a complex of proteins that constitute adherens junctions (AJs). AJs are necessary for the creation and maintenance of epithelial cell layers by regulating cell growth and adhesion between cells. The encoded protein also anchors the actin cytoskeleton and may be responsible for transmitting the contact inhibition signal that causes cells to stop dividing once the epithelial sheet is complete. Finally, this protein binds to the product of the APC gene, which is mutated in adenomatous polyposis of the colon. Mutations in this gene are a cause of colorectal cancer (CRC), pilomatrixoma (PTR), medulloblastoma (MDB), and ovarian cancer. Alternative splicing results in multiple transcript variants.
