IGFBP3 Human Gene Knockout Kit (CRISPR)

Product data:

Product Type: Knockout Kits (CRISPR)

Format: 2 gRNA vectors, 1 Luciferase-Puro donor, 1 scramble control

Donor DNA: Luciferase-Puro

Symbol: IGFBP3 Locus ID: 3486

Components: KN209150G1, IGFBP3 gRNA vector 1 in pCas-Guide CRISPR vector (GE100002)

KN209150G2, IGFBP3 gRNA vector 2 in pCas-Guide CRISPR vector (GE100002)

KN209150LPD, donor DNA containing left and right homologous arms and Luciferase-Puro

functional cassette.

GE100003, scramble sequence in pCas-Guide vector

Disclaimer: These products are manufactured and supplied by OriGene under license from ERS. The kit is

designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the

experimental process.

RefSeq: <u>NM 000598</u>, <u>NM 001013398</u>

UniProt ID: P17936

Synonyms: BP-53; IBP3

Summary: This gene is a member of the insulin-like growth factor binding protein (IGFBP) family and

encodes a protein with an IGFBP domain and a thyroglobulin type-I domain. The protein forms a ternary complex with insulin-like growth factor acid-labile subunit (IGFALS) and either insulin-like growth factor (IGF) I or II. In this form, it circulates in the plasma, prolonging the

half-life of IGFs and altering their interaction with cell surface receptors. Alternate transcriptional splice variants, encoding different isoforms, have been characterized.
