ZNF281 Human Gene Knockout Kit (CRISPR)

Product data:

Product Type: Knockout Kits (CRISPR)

Format: 2 gRNA vectors, 1 Luciferase-Puro donor, 1 scramble control

Donor DNA: Luciferase-Puro

Symbol: ZNF281 Locus ID: 23528

Components: KN209243G1, ZNF281 gRNA vector 1 in pCas-Guide CRISPR vector (GE100002)

KN209243G2, ZNF281 gRNA vector 2 in pCas-Guide CRISPR vector (GE100002)

KN209243LPD, donor DNA containing left and right homologous arms and Luciferase-Puro

functional cassette.

GE100003, scramble sequence in pCas-Guide vector

Disclaimer: These products are manufactured and supplied by OriGene under license from ERS. The kit is

designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the

experimental process.

RefSeq: <u>NM 001281293, NM 001281294, NM 012482</u>

UniProt ID: Q9Y2X9

Synonyms: ZBP-99; ZNP-99

Summary: Transcription repressor that plays a role in regulation of embryonic stem cells (ESCs)

differentiation. Required for ESCs differentiation and acts by mediating autorepression of NANOG in ESCs: binds to the NANOG promoter and promotes association of NANOG protein to its own promoter and recruits the NuRD complex, which deacetylates histones. Not

required for establishement and maintenance of ESCs (By similarity). Represses the transcription of a number of genes including GAST, ODC1 and VIM. Binds to the G-rich box in

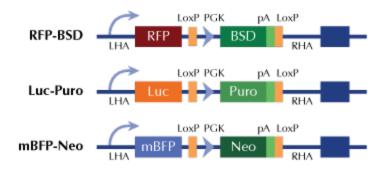

the enhancer region of these genes.[UniProtKB/Swiss-Prot Function]
