

Product datasheet for KN209247LP

c Maf (MAF) Human Gene Knockout Kit (CRISPR)

Product data:

Product Type: Knockout Kits (CRISPR) Format: 2 gRNA vectors, 1 Luciferase-Puro donor, 1 scramble control Donor DNA: Luciferase-Puro c Maf Symbol: Locus ID: 4094 KN209247G1, c Maf gRNA vector 1 in pCas-Guide CRISPR vector (GE100002) **Components:** KN209247G2, c Maf gRNA vector 2 in pCas-Guide CRISPR vector (GE100002) KN209247LPD, donor DNA containing left and right homologous arms and Luciferase-Puro functional cassette. GE100003, scramble sequence in pCas-Guide vector **Disclaimer:** These products are manufactured and supplied by OriGene under license from ERS. The kit is designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the experimental process. NM 001031804, NM 005360 RefSeq: UniProt ID: 075444 Synonyms: c-MAF; CCA4; CTRCT21 Summary: The protein encoded by this gene is a DNA-binding, leucine zipper-containing transcription factor that acts as a homodimer or as a heterodimer. Depending on the binding site and binding partner, the encoded protein can be a transcriptional activator or repressor. This protein plays a role in the regulation of several cellular processes, including embryonic lens fiber cell development, increased T-cell susceptibility to apoptosis, and chondrocyte terminal differentiation. Defects in this gene are a cause of juvenile-onset pulverulent cataract as well as congenital cerulean cataract 4 (CCA4). Two transcript variants encoding different isoforms

have been found for this gene. [provided by RefSeq, Jan 2010]
