Disclaimer: These products are manufactured and supplied by OriGene under license from ERS. The kit is

designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the

experimental process.

Summary: This gene encodes an enzyme belonging to the family of fucosyltransferases. The product of

this gene catalyzes the transfer of fucose from GDP-fucose to N-linked type complex

glycopeptides. This enzyme is distinct from other fucosyltransferases which catalyze alpha1-2, alpha1-3, and alpha1-4 fucose addition. The expression of this gene may contribute to the malignancy of cancer cells and to their invasive and metastatic capabilities. Alternative

splicing results in multiple transcript variants. [provided by RefSeq, May 2011]
