LCK Human Gene Knockout Kit (CRISPR)

Product data:

Product Type: Knockout Kits (CRISPR)

Format: 2 gRNA vectors, 1 Luciferase-Puro donor, 1 scramble control

Donor DNA: Luciferase-Puro

Symbol: LCK Locus ID: 3932

Components: KN219375G1, LCK gRNA vector 1 in pCas-Guide CRISPR vector (GE100002)

KN219375G2, LCK gRNA vector 2 in pCas-Guide CRISPR vector (GE100002)

KN219375LPD, donor DNA containing left and right homologous arms and Luciferase-Puro

functional cassette.

GE100003, scramble sequence in pCas-Guide vector

Disclaimer: These products are manufactured and supplied by OriGene under license from ERS. The kit is

designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the

experimental process.

RefSeq: <u>NM 001042771</u>, <u>NM 001330468</u>, <u>NM 005356</u>

UniProt ID: <u>P06239</u>

Synonyms: IMD22; LSK; p56lck; pp58lck; YT16

Summary: This gene is a member of the Src family of protein tyrosine kinases (PTKs). The encoded

protein is a key signaling molecule in the selection and maturation of developing T-cells. It contains N-terminal sites for myristylation and palmitylation, a PTK domain, and SH2 and SH3 domains which are involved in mediating protein-protein interactions with phosphotyrosine-

containing and proline-rich motifs, respectively. The protein localizes to the plasma

membrane and pericentrosomal vesicles, and binds to cell surface receptors, including CD4 and CD8, and other signaling molecules. Multiple alternatively spliced variants encoding

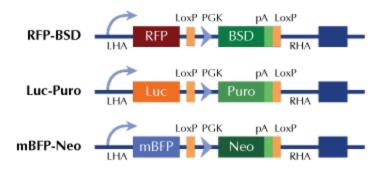

different isoforms have been described. [provided by RefSeq, Aug 2016]
