**Disclaimer:** These products are manufactured and supplied by OriGene under license from ERS. The kit is

designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the

experimental process.

**RefSeq:** <u>NM 011596</u>

UniProt ID: <u>P15920</u>

**Synonyms:** 8430408C20Rik; Al385560; ATP6a2; Atp6n1d; Atp6n2; AW489264; C76904; ISF; J6B7; SHIF;

**Summary:** This gene encodes a subunit of vacuolar ATPase, a multimeric enzyme that localizes to

intracellular vesicles and to the plasma membrane of specialized cells. The encoded protein

is a component of the V(0) domain, which functions in proton translocation across

membranes. Function of this gene is important in fetal-specific immune suppression during

pregnancy. [provided by RefSeq, May 2013]
