

## Product datasheet for **KN400247**

### **SEC61B Human Gene Knockout Kit (CRISPR)**

#### **Product data:**

Product Type:	Knockout Kits (CRISPR)
Format:	2 gRNA vectors, 1 linear donor
Donor DNA:	EF1a-GFP-P2A-Puro
Symbol:	SEC61B
Locus ID:	10952

[View online »](#)

**Components:**
**KN400247G1**, SEC61B gRNA vector 1 in pCas-Guide CRISPR vector (GE100002)

**KN400247G2**, SEC61B gRNA vector 2 in pCas-Guide CRISPR vector (GE100002)

**KN400247D**, Linear donor DNA containing LoxP-EF1a-tGFP-P2A-Puro-LoxP:

The sequence below is cassette sequence only. The linear donor DNA also contains proprietary target sequence.

LoxP-EF1a-tGFP-P2A-Puro-LoxP (2739 bp)

**Disclaimer:** These products are manufactured and supplied by OriGene under license from ERS. The kit is designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the experimental process.

**RefSeq:** [NM\\_006808](#)

**UniProt ID:** [P60468](#)

**Synonyms:** OTTHUMP00000021784; protein translocation complex beta; protein transport protein SEC61 beta subunit; Sec61 beta subunit; Sec61 complex, beta subunit

**Summary:** The Sec61 complex is the central component of the protein translocation apparatus of the endoplasmic reticulum (ER) membrane. Oligomers of the Sec61 complex form a transmembrane channel where proteins are translocated across and integrated into the ER membrane. This complex consists of three membrane proteins- alpha, beta, and gamma. This gene encodes the beta-subunit protein. The Sec61 subunits are also observed in the post-ER compartment, suggesting that these proteins can escape the ER and recycle back. There is evidence for multiple polyadenylated sites for this transcript. [provided by RefSeq, Jul 2008]
