

Product datasheet for **KN410135**

EV11 (MECOM) Human Gene Knockout Kit (CRISPR)

Product data:

Product Type:	Knockout Kits (CRISPR)
Format:	2 gRNA vectors, 1 linear donor
Donor DNA:	EF1a-GFP-P2A-Puro
Symbol:	EV11
Locus ID:	2122
Components:	<p>KN410135G1, EV11 gRNA vector 1 in pCas-Guide CRISPR vector (GE100002), Target Sequence: GATGCCAGTCAACCAGATGT</p> <p>KN410135G2, EV11 gRNA vector 2 in pCas-Guide CRISPR vector (GE100002), Target Sequence: TGAGAGCACAAAAGTATCAC</p> <p>KN410135D, Linear donor DNA containing LoxP-EF1A-tGFP-P2A-Puro-LoxP: The sequence below is cassette sequence only. The linear donor DNA also contains proprietary target sequence.</p>

LoxP-EF1A-tGFP-P2A-Puro-LoxP (2739 bp)

Disclaimer:

These products are manufactured and supplied by OriGene under license from ERS. The kit is designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the experimental process.

UniProt ID:

[Q13465](#)

Synonyms:

AML1-EVI-1; EVI1; MDS1; MDS1-EVI1; PRDM3

Summary:

The protein encoded by this gene is a transcriptional regulator and oncoprotein that may be involved in hematopoiesis, apoptosis, development, and cell differentiation and proliferation. The encoded protein can interact with CTBP1, SMAD3, CREBBP, KAT2B, MAPK8, and MAPK9. This gene can undergo translocation with the AML1 gene, resulting in overexpression of this gene and the onset of leukemia. Several transcript variants encoding a few different isoforms have been found for this gene. [provided by RefSeq, Mar 2011]
