

## Product datasheet for **KN410578**

### Cathepsin B (CTSB) Human Gene Knockout Kit (CRISPR)

#### Product data:

|               |  |
|---------------|--|
| Product Type: | Knockout Kits (CRISPR)   |
| Format:       | 2 gRNA vectors, 1 linear donor   |
| Donor DNA:    | EF1a-GFP-P2A-Puro  |
| Symbol:       | Cathepsin B  |
| Locus ID:     | 1508   |
| Components:   | <p><b>KN410578G1</b>, Cathepsin B gRNA vector 1 in pCas-Guide CRISPR vector (GE100002), Target Sequence: CAACACCAGCAGGCAGCAGA</p> <p><b>KN410578G2</b>, Cathepsin B gRNA vector 2 in pCas-Guide CRISPR vector (GE100002), Target Sequence: ATGGAAAGAGGGCCTGCTCC</p> <p><b>KN410578D</b>, Linear donor DNA containing LoxP-EF1A-tGFP-P2A-Puro-LoxP:<br/>The sequence below is cassette sequence only. The linear donor DNA also contains proprietary target sequence.</p> |

LoxP-EF1A-tGFP-P2A-Puro-LoxP (2739 bp)

**Disclaimer:**

These products are manufactured and supplied by OriGene under license from ERS. The kit is designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the experimental process.

**RefSeq:**

[NM\\_001317237](#), [NM\\_001908](#), [NM\\_147780](#), [NM\\_147781](#), [NM\\_147782](#), [NM\\_147783](#)

**UniProt ID:**

[P07858](#)

**Synonyms:**

APPS; CPSB

**Summary:**

This gene encodes a member of the C1 family of peptidases. Alternative splicing of this gene results in multiple transcript variants. At least one of these variants encodes a preproprotein that is proteolytically processed to generate multiple protein products. These products include the cathepsin B light and heavy chains, which can dimerize to form the double chain form of the enzyme. This enzyme is a lysosomal cysteine protease with both endopeptidase and exopeptidase activity that may play a role in protein turnover. It is also known as amyloid precursor protein secretase and is involved in the proteolytic processing of amyloid precursor protein (APP). Incomplete proteolytic processing of APP has been suggested to be a causative factor in Alzheimer's disease, the most common cause of dementia. Overexpression of the encoded protein has been associated with esophageal adenocarcinoma and other tumors. Both Cathepsin B and Cathepsin L are involved in the cleavage of the spike protein from the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) upon its entry to the human host cell. Multiple pseudogenes of this gene have been identified. [provided by RefSeq, Sep 2020]
