

## Product datasheet for **KN413636**

### OR10J3 Human Gene Knockout Kit (CRISPR)

#### Product data:

Product Type:	Knockout Kits (CRISPR)
Format:	2 gRNA vectors, 1 linear donor
Donor DNA:	EF1a-GFP-P2A-Puro
Symbol:	OR10J3
Locus ID:	441911

[View online »](#)

**Components:**
**KN413636G1**, OR10J3 gRNA vector 1 in pCas-Guide CRISPR vector (GE100002)

**KN413636G2**, OR10J3 gRNA vector 2 in pCas-Guide CRISPR vector (GE100002)

**KN413636D**, Linear donor DNA containing LoxP-EF1a-tGFP-P2A-Puro-LoxP:

The sequence below is cassette sequence only. The linear donor DNA also contains proprietary target sequence.

LoxP-EF1a-tGFP-P2A-Puro-LoxP (2739 bp)

**Disclaimer:** These products are manufactured and supplied by OriGene under license from ERS. The kit is designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the experimental process.

**RefSeq:** [NM\\_001004467](#)

**UniProt ID:** [Q5JRS4](#)

**Synonyms:** OR1-25; OR10J3P

**Summary:** Olfactory receptors interact with odorant molecules in the nose, to initiate a neuronal response that triggers the perception of a smell. The olfactory receptor proteins are members of a large family of G-protein-coupled receptors (GPCR) arising from single coding-exon genes. Olfactory receptors share a 7-transmembrane domain structure with many neurotransmitter and hormone receptors and are responsible for the recognition and G protein-mediated transduction of odorant signals. The olfactory receptor gene family is the largest in the genome. The nomenclature assigned to the olfactory receptor genes and proteins for this organism is independent of other organisms. This gene is considered a pseudogene because the encoded protein is truncated and missing the last transmembrane domain in several mammals.[provided by RefSeq, Jun 2021]
