RefSeq:	NM_001080486 , NM_001199206
UniProt ID:	A6ND01
Synonyms:	folate receptor 4 (delta) homolog; folate receptor 4 (delta) homolog (mouse); Folbp3
Summary:	Receptor for IZUMO1 present at the cell surface of oocytes (oolemma), which is essential for species-specific gamete recognition and fertilization. The IZUMO1:IZUMO1R/JUNO interaction is a necessary adhesion event between sperm and egg that is required for fertilization but is not sufficient for cell fusion. The ligand-receptor interaction probably does not act as a membrane 'fusogen'. Does not bind folate.[UniProtKB/Swiss-Prot Function]
