RefSeq:	NM_001006121 , NM_001320948
UniProt ID:	A6NDE4
Synonyms:	RNA-binding motif protein, Y chromosome, family 1 member B; RNA binding motif protein, Y-linked, family 1, member B
Summary:	This gene encodes a protein containing an RNA-binding motif in the N-terminus and four SRGY (serine, arginine, glycine, tyrosine) boxes in the C-terminus. This protein likely functions as a splicing factor during spermatogenesis. Multiple closely related paralogs of this gene are found in a gene cluster in the AZFb azoospermia factor region of chromosome Y. Most of these related copies are thought to be pseudogenes, though several likely encode functional proteins. [provided by RefSeq, Mar 2016]
