

## Product datasheet for **KN422534**

### FIGN Human Gene Knockout Kit (CRISPR)

#### Product data:

Product Type:	Knockout Kits (CRISPR)
Format:	2 gRNA vectors, 1 linear donor
Donor DNA:	EF1a-GFP-P2A-Puro
Symbol:	FIGN
Locus ID:	55137

[View online »](#)

**Components:**
**KN422534G1**, FIGN gRNA vector 1 in pCas-Guide CRISPR vector (GE100002)

**KN422534G2**, FIGN gRNA vector 2 in pCas-Guide CRISPR vector (GE100002)

**KN422534D**, Linear donor DNA containing LoxP-EF1A-tGFP-P2A-Puro-LoxP:

The sequence below is cassette sequence only. The linear donor DNA also contains proprietary target sequence.

LoxP-EF1A-tGFP-P2A-Puro-LoxP (2739 bp)

**Disclaimer:** These products are manufactured and supplied by OriGene under license from ERS. The kit is designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the experimental process.

**RefSeq:** [NM\\_018086](#), [NM\\_001321825](#)

**UniProt ID:** [Q5HY92](#)

**Synonyms:** fidgetin; FLJ10405, FLJ22094; OTTHUMP00000082689

**Summary:** ATP-dependent microtubule severing protein. Severs microtubules along their length and depolymerizes their ends, primarily the minus-end, that may lead to the suppression of microtubule growth from and attachment to centrosomes. Microtubule severing may promote rapid reorganization of cellular microtubule arrays and the release of microtubules from the centrosome following nucleation. Microtubule release from the mitotic spindle poles may allow depolymerization of the microtubule end proximal to the spindle pole, leading to poleward microtubule flux and poleward motion of chromosome.[UniProtKB/Swiss-Prot Function]
