UniProt ID: [Q9R158](#)

Synonyms: Adam26; Dtgn4

Summary: This gene encodes a member of a disintegrin and metalloprotease (ADAM) family of endoproteases that play important roles in various biological processes including cell signaling, adhesion and migration. This gene is expressed in a regulated fashion during the late stages of spermatogenesis. The encoded preproprotein undergoes proteolytic processing to generate a mature, functional metalloprotease enzyme. This gene is located adjacent to two other ADAM genes on chromosome 8.
