Disclaimer: These products are manufactured and supplied by OriGene under license from ERS. The kit is designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the experimental process.

RefSeq: [NM_007402](#)

UniProt ID: [O35227](#)

Synonyms: ADAM 7; EAP1; EAPI

Summary: This gene encodes a member of a disintegrin and metalloprotease (ADAM) family of endoproteases that play important roles in various biological processes including cell signaling, adhesion and migration. This gene is specifically expressed in epididymis where the encoded protein is transferred to the sperm surface during epididymal transit. This gene is located adjacent to a related gene from the ADAM family of proteins on chromosome 14. [provided by RefSeq, Oct 2015]
