Disclaimer: These products are manufactured and supplied by OriGene under license from ERS. The kit is designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the experimental process.

Summary: This gene encodes a protein with ankyrin repeats, which are associated with protein-protein interactions. Studies suggest that this protein is involved in liver development. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2008]
