**Disclaimer:** These products are manufactured and supplied by OriGene under license from ERS. The kit is designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the experimental process.

**Synonyms:** Cf-13b; Cf13b

**Summary:** This gene encodes subunit B of the coagulation factor XIII that catalyzes the final step of the blood coagulation pathway. The encoded protein associates with subunit A to form a heterotetrameric protein that circulates in the plasma. During the blood coagulation process, thrombin-mediated proteolytic cleavage of the subunit A results in the dissociation of the encoded protein from the heterotetramer. Male mice lacking the encoded protein exhibit mild fibrosis together with hemosiderin deposits in the heart. [provided by RefSeq, Sep 2015]
