**Disclaimer:** These products are manufactured and supplied by OriGene under license from ERS. The kit is designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the experimental process.

**RefSeq:** [NM\\_001039042](#)

**Synonyms:** Egfbp-2; mGk-13

**Summary:** Kallikreins are serine proteases encoded by a cluster of highly related genes on chromosome 7. When genomic sequence became available, it was possible to clarify the gene-to-sequence relationship for this family. Until January, 2006, NM\_010115 was called kallikrein 13. After that time, NM\_001039042 was called Klk13 and NM\_010115 was called Klk1b26. [provided by RefSeq, Jul 2008]
