Disclaimer: These products are manufactured and supplied by OriGene under license from ERS. The kit is designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the experimental process.

Summary: PA2 catalyzes the calcium-dependent hydrolysis of the 2-acyl groups in 3-sn-phosphoglycerides. Testis PA2 may be important in the production of prostaglandins, by the release of arachidonic acid, which in turn are necessary for the contractions of the seminiferous tubules and the testicular capsule; they also seem to decrease sperm transit time through the male reproductive tract.[UniProtKB/Swiss-Prot Function]
