**Disclaimer:** These products are manufactured and supplied by OriGene under license from ERS. The kit is designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the experimental process.

**UniProt ID:** [A2ASI5](#)

**Synonyms:** Gm1000; Nav1.3

**Summary:** Mediates the voltage-dependent sodium ion permeability of excitable membranes. Assuming opened or closed conformations in response to the voltage difference across the membrane, forms a sodium-selective channel through which Na<sup>(+)</sup> ions may pass in accordance with their electrochemical gradient (PubMed:29142310). May contribute to the regulation of serotonin/5-hydroxytryptamine release by enterochromaffin cells (PubMed:29142310). In pancreatic endocrine cells, required for both glucagon and glucose-induced insulin secretion (PubMed:25172946).[UniProtKB/Swiss-Prot Function]
