

## Product datasheet for **KN518515**

### **Txndc8 Mouse Gene Knockout Kit (CRISPR)**

#### **Product data:**

|                      |                                |
|----------------------|--------------------------------|
| <b>Product Type:</b> | Knockout Kits (CRISPR)         |
| <b>Format:</b>       | 2 gRNA vectors, 1 linear donor |
| <b>Donor DNA:</b>    | EFla-GFP-P2A-Puro              |
| <b>Symbol:</b>       | Txndc8                         |
| <b>Locus ID:</b>     | 67402                          |

Components:

**KN518515G1**, Txndc8 gRNA vector 1 in pCas-Guide CRISPR vector (GE100002)

**KN518515G2**, Txndc8 gRNA vector 2 in pCas-Guide CRISPR vector (GE100002)

**KN518515D**, Linear donor DNA containing LoxP-EF1a-tGFP-P2A-Puro-LoxP:

The sequence below is cassette sequence only. The linear donor DNA also contains proprietary target sequence.

LoxP-EF1a-tGFP-P2A-Puro-LoxP (2739 bp)

| <b>OTI Disclaimer:</b> | These products are manufactured and supplied by OriGene under license from ERS. The kit is designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the experimental process. |
| <b>RefSeq:</b>         | <u><a href="#">NM_026132</a></u>                                                                                                                                                                                                                                                                                                                                                      |

| <b>Synonyms:</b>       | 4930429J24Rik; Sptrx-3; Sptrx3; Trx6                                                                                                                                                                                                                                                                                                                                                  |
| <b>Summary:</b>        | May be required for post-translational modifications of proteins required for acrosomal biogenesis. May act by reducing disulfide bonds within the sperm (By similarity).<br>[UniProtKB/Swiss-Prot Function]                                                                                                                                                                          |
