OTI Disclaimer:	These products are manufactured and supplied by OriGene under license from ERS. The kit is designed based on the best knowledge of CRISPR technology. The system has been functionally validated for knocking-in the cassette downstream the native promoter. The efficiency of the knock-out varies due to the nature of the biology and the complexity of the experimental process.
RefSeq:	<u>NM_011667</u> , <u>NM_001357043</u>
UniProt ID:	<u>P31254</u>
Synonyms:	Als9Y-1; Sby; Ube-2; Ubelay; Ubely; Ubely-1; Ubelyl
Summary:	Activates ubiquitin by first adenylating its C-terminal glycine residue with ATP, and thereafter linking this residue to the side chain of a cysteine residue in E1, yielding a ubiquitin-E1 thioester and free AMP (By similarity). The Y chromosome form could be involved in the survival and proliferation of differentiating spermatogonia.[UniProtKB/Swiss-Prot Function]
