RefSeq: NM_176847

UniProt ID: Q80T11

Synonyms: js; Sans

Summary: This gene encodes a protein that contains three ankyrin domains, a class I PDZ-binding motif and a sterile alpha motif. The encoded protein interacts with harmonin, which is associated with Usher syndrome type 1C. This protein plays a role in the development and maintenance of the auditory and visual systems and functions in the cohesion of hair bundles formed by inner ear sensory cells. Mutations in this gene are associated with combined auditory and vision loss. [provided by RefSeq, Sep 2015]
