# Product datasheet for LC416914

### HS3ST3B1 (NM\_006041) Human Over-expression Lysate

### **Product data:**

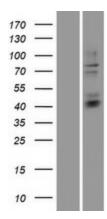

| Product Type:                            | Over-expression Lysates                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Components:                              | 1 vial of 20 ug lyophilized gene specific transient over-expression cell lysate                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Storage:                                 | The lysate can be shipped at ambient temperature. Upon receiving, store the sample at -<br>20°C. Lysate samples can be reconstituted with SDS Sample Buffer. Avoid repeated freeze-<br>thaw cycles after reconstitution. Lysate samples are stable for 12 months from date of receipt<br>when stored at -20°C.                                                                                                                                                                                                                                                                                                                 |
| Preparation:                             | HEK293T cells in 10-cm dishes were transiently transfected with <u>MegaTran</u> Transfection<br>Reagent (TT200002) and 5ug <u>TrueORF</u> cDNA plasmid. Transfected cells were cultured for<br>48hrs before collection. The cells were lysed in modified RIPA buffer (25mM Tris-HCl pH7.6,<br>150mM NaCl, 1% NP-40, 1mM EDTA, 1xProteinase inhibitor cocktail mix (Sigma), 1mM PMSF<br>and 1mM Na3VO4), and then centrifuged to clarify the lysate. Protein concentration was<br>measured by BCA kit (Thermo Scientific Inc.). To facilitate transportation and protein, the<br>products are supplied as lyophilized proteins. |
