| Predicted MW:                            | 33.2 kDa                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Components:                              | 1 vial of 100 μg gene specific transient over-expression cell lysate in RIPA buffer<br>1 vial of 100 μg whole HEK293T cell lysate in RIPA buffer<br>1 vial of 250ul 2xSDS Sample Buffer (4% SDS, 125mM Tris-HCl pH6.8, 10% Glycerol, 0.002%<br>Bromophenol blue, 100mM DTT)                                                                                                                                                                                                                                                                                                                        |
| Storage:                                 | The lysate is shipped with dry ice. Upon receiving, store the sample at -80°C. Also after dilution, the protein sample should be aliquoted and stored at -80°C for long term storage. Avoid repeated freeze-thaw cycles. Lysate samples can be diluted with 2xSDS Sample Buffer provided. Lysate samples are stable for 12 months from the date of receipt when stored at -80°C.                                                                                                                                                                                                                   |
| Preparation:                             | HEK293T cells in 10-cm dishes were transiently transfected with <u>MegaTran</u> Transfection<br>Reagent (TT200002) and 5ug <u>TrueORF</u> cDNA plasmid. Transfected cells were cultured for<br>48hrs before collection. The cells were lysed in modified RIPA buffer (25mM Tris-HCl pH7.6,<br>150mM NaCl, 1% NP-40, 1mM EDTA, 1xProteinase inhibitor cocktail mix (Sigma), 1mM PMSF<br>and 1mM Na3VO4), and then centrifuged to clarify the lysate. Protein concentration was<br>measured by BCA kit (Thermo Scientific Inc.). Cell lysates were aliquoted and stored at -20°C<br>before shipping. |
