

Product datasheet for **MC203598**

Wiz (NM_212438) Mouse Untagged Clone

Product data:

Product Type:	Expression Plasmids
Product Name:	Wiz (NM_212438) Mouse Untagged Clone
Tag:	Tag Free
Symbol:	Wiz
Mammalian Cell Selection:	Neomycin
Vector:	PCMV6-Kan/Neo (PCMV6KN)
E. coli Selection:	Kanamycin (25 ug/mL)
Fully Sequenced ORF:	>BC053035

- Restriction Sites:** Ascl-NotI
- ACCN:** NM_212438
- Insert Size:** 2949 bp
- OTI Disclaimer:** Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).
- Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method:

1. Centrifuge at 5,000xg for 5min.
2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeq: [BC053035](#), [AAH53035](#)

RefSeq Size: 4413 bp

RefSeq ORF: 2949 bp

Locus ID: 22404

UniProt ID: [O88286](#)

Cytogenetics: 17 B1

Gene Summary: May link EHMT1 and EHMT2 histone methyltransferases to the CTBP corepressor machinery. May be involved in EHMT1-EHMT2 heterodimer formation and stabilization.
[UniProtKB/Swiss-Prot Function]
Transcript Variant: This variant (1) encodes the longer isoform (1). The 5' end of this variant is incomplete due to the lack of 5'-complete transcripts with this exon combination, and the presence of alternate splicing choices further upstream.
